Docker Jenkins Pipeline to Implement CI/CD Workflow

DESCRIPTION

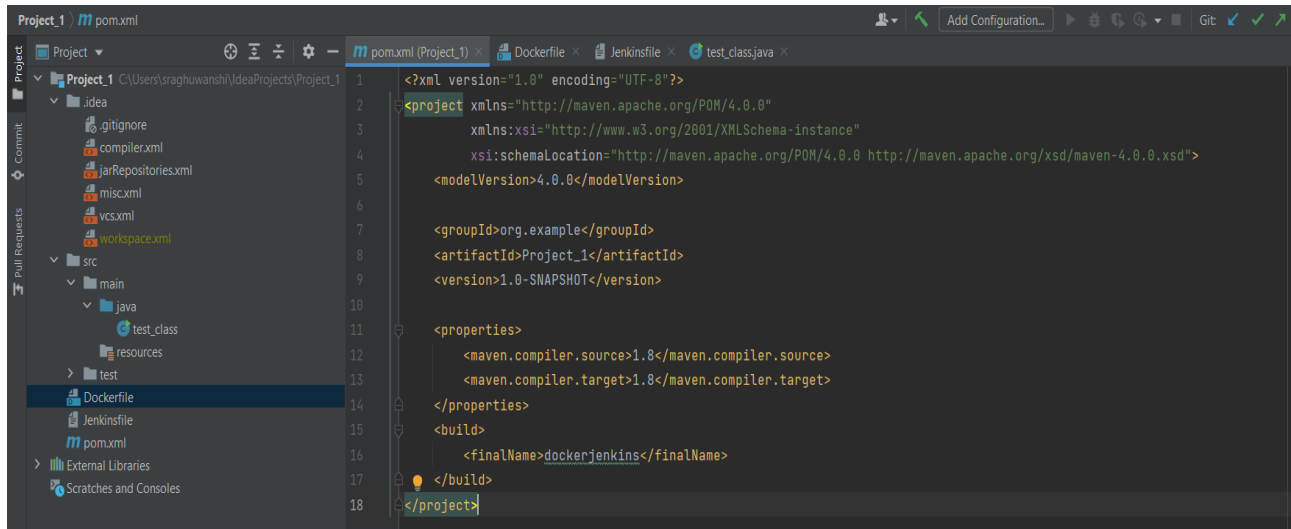

Demonstrate the continuous integration and delivery by building a Docker Jenkins Pipeline.

CONTENTS

1. Availability of the application and its versions in the GitHub
 - 1.1 Track their versions every time a code is committed to the repository
2. Create a Docker Jenkins Pipeline that will create a Docker image from the Dockerfile and host it on Docker Hub
3. It should also pull the Docker image and run it as a Docker container
4. Build the Docker Jenkins Pipeline to demonstrate the continuous integration and continuous delivery workflow

1. Availability of the application and its versions in the GitHub

1.1 Prepared a maven project in IntelliJ

1.2 Initiated git and checked-out code to GitHub –

```
VMWARE+srghuwanshi@srghuwansh-z01 MINGW64 ~/IdeaProjects/Project_1
$ git init
Initialized empty Git repository in C:/Users/srghuwanshi/IdeaProjects/Project_1/.git/

1.5 Prepare a Jenkins pipeline to checkout the code and prepare a build –

- Check if Jenkins is running –

4. Build the Docker Jenkins Pipeline to demonstrate the continuous integration and continuous delivery workflow

4.1 Added below command in Dockerfile to deploy the prepared build –

```
FROM ubuntu:latest
RUN apt-get update
RUN apt install -y vim
ADD target/dockerjenkins.jar dockerjenkins.jar
CMD "/bin/bash"
```

4.2 Prepared build copied to docker container as part of CI/CD pipeline –

```
raghulcsanjaym@raghulcsanjaym:~/dockerfile_demo$
raghulcsanjaym@raghulcsanjaym:~/dockerfile_demo$ docker run -it sanjayraghuwanshi/dockerjenkins:latest /bin/bash
